

# My knitr demo

Michael Ash

November 16, 2021

You can test if **knitr** works with this minimal demo. OK, let's get started with some boring random numbers:

```
set.seed(1121)
(x=rnorm(20))

## [1] 0.1449583 0.4383221 0.1531912 1.0849426 1.9995449
## [6] -0.8118832 0.1602680 0.5858923 0.3600880 -0.0253084
## [11] 0.1508809 0.1100824 1.3596812 -0.3269946 -0.7163819
## [16] 1.8097690 0.5084011 -0.5274603 0.1327188 -0.1559430

(xbar <- mean(x)); (xvar <- var(x))

## [1] 0.3217385
## [1] 0.5714534
```

The first element  $X_1$  of  $\mathbf{x}$  is 0.1449583. Rounded to two decimal places, the mean is 0.32 and the variance is 0.57.

Here are the annotated results of a couple of coin tosses (at this point we hand random-number generation back to the system:

```
set.seed(Sys.time())
```

The coin comes up tails.

Here is the result of another coin toss. The coin comes up heads instead.

A boring plot in ggplot can be see in Figure 1.

Summary statistics are in Table 1.

```
stargazer(cars, title="Summary statistics", label="tab:summary")
```

And the regression results are in Table 2

```
stargazer(model1, model2, model3, title="Regression results", label="tab:regression")
```

Figure 1: A boring figure

Table 1: Summary statistics

Statistic	N	Mean	St. Dev.	Min	Pctl(25)	Pctl(75)	Max
speed	50	15.400	5.288	4	12	19	25
dist	50	42.980	25.769	2	26	56	120

Table 2: Regression results

	<i>Dependent variable:</i>		
		dist	
	(1)	(2)	(3)
speed	3.932*** (0.416)	0.913 (2.034)	6.801 (6.801)
I(speed^2)		0.100 (0.066)	-0.350 (0.500)
I(speed^3)			0.010 (0.011)
Constant	-17.579** (6.758)	2.470 (14.817)	-19.505 (28.405)
Observations	50	50	50
R <sup>2</sup>	0.651	0.667	0.673
Adjusted R <sup>2</sup>	0.644	0.653	0.652
Residual Std. Error	15.380 (df = 48)	15.176 (df = 47)	15.205 (df = 46)
F Statistic	89.567*** (df = 1; 48)	47.141*** (df = 2; 47)	31.584*** (df = 3; 46)

*Note:*

\*p&lt;0.1; \*\*p&lt;0.05; \*\*\*p&lt;0.01

```
stargazer(model1, model2, model3, title="Regression results", label="tab:regression:newnames")
```

Table 3: Regression results

	<i>Dependent variable:</i>		
		dist	
	(1)	(2)	(3)
speed	3.932*** (0.416)	0.913 (2.034)	6.801 (6.801)
I(speed^2)		0.100 (0.066)	
Speed-squared			-0.350 (0.500)
Speed-cubed			0.010 (0.011)
Constant	-17.579** (6.758)	2.470 (14.817)	-19.505 (28.405)
Observations	50	50	50
R <sup>2</sup>	0.651	0.667	0.673
Adjusted R <sup>2</sup>	0.644	0.653	0.652
Residual Std. Error	15.380 (df = 48)	15.176 (df = 47)	15.205 (df = 46)
F Statistic	89.567*** (df = 1; 48)	47.141*** (df = 2; 47)	31.584*** (df = 3; 46)
<i>Note:</i>		*p<0.1; **p<0.05; ***p<0.01	

Do the chunks work? You should be able to compile the L<sup>A</sup>T<sub>E</sub>X document.
